International Conference on extreme weather, climate change and water management

Pre announcement

International Conference on extreme weather, climate change and water management

Four years ago six European water authorities started the project "Water Adaptation is Valuable for Everybody" (WAVE) with the aim of making European river catchments more climate resilient. As part of the closing activities for this project the WAVE partnership will proudly present their results as well as offer you a forum for debate and networking during our final conference in Zwolle, the Netherlands.

At our international conference on 29 May 2013 we will celebrate WAVE's achievements and exhibit how our shared understanding and experiences on climate change have led to new common goals as well as a new common European project: DROP, "benefit of governance in DROught adaPtation". In this project eleven European partners are working on new innovative solutions to address drought and water scarcity issues.

We are delighted to be able to invite you to our conference and look forward to welcoming you in Zwolle!

Program 29 May 2013
